

Fink-Frankel - Family Groups

This genealogy includes 1,692 individuals distributed in 37 independant family groups not linked between each others.

19 of these groups are described below and have a size above given threshold of 2. They represent together 1,674 individuals.

18 other groups with smaller sizes jointly represent the remaining 18 individuals.

Note: family groups and subgroups can be extracted into a separate Gedcom file using the buttons in the menubar on the left hand side, or using 'File/SaveAs...' and then selecting the Groups in the 'Filter by Views' tab.

Group number 1 is composed of 1,231 individuals

The most ancient ancestor is: [Kubie \(born Kuvia\), Prague > Susice](#) Samuel (abt 1680 - 1749) I500333
The most recent individual is: [Fink](#) Alexander Lorenz (3 Jan 2005 -) I336
Most likely Decujus individual is [Fink](#) Alexander Lorenz (3 Jan 2005 -) I336 with 116 different ancestors.
